Date	07 Nov 2022
Team ID	PNT2022TMID10794
Project Name	CUSTOMER CARE REGISTRY

FLASK SETUP:

The image shows the PyCharm IDE interface. The main editor displays the code for `main.py` in a project named `HelloWorld`. The code is a simple Flask application that returns "Hello World" when accessed at the root URL. The `run()` method is called to start the development server. The Run console at the bottom shows the command used to execute the script and the output of the server, including a warning about using a development server and log messages for incoming requests.

```
1 # Importing flask module in the project is mandatory
2 from flask import Flask
3 app = Flask(__name__)
4 # The route() function of the Flask class is a decorator,
5 @app.route('/')
6 # '/' URL is bound with hello_world() function.
7 def hello_world():
8     return 'Hello World'
9 # main driver function
10 if __name__ == '__main__':
11     # run() method of Flask class runs the application
12     # on the local development server.
13     app.run()
14
```

Run: `C:\Users\ariha\PycharmProjects\HelloWorld\venv\Scripts\python.exe C:\Users\ariha\PycharmProjects\HelloWorld/main.py`

* Serving Flask app 'main'

* Debug mode: off

WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.

* Running on <http://127.0.0.1:5000>

Press CTRL+C to quit
